

A Dravidian decipherment of Indus script

S.K.Venkatesan
CQRL Bits, Chennai

5 Abstract

The Indus script writing system is described here as a logo-syllabic system with almost unique syllables associated with them. The crucial aspect of the decipherment is the observation that semantic value of numbers are not related to quantifiers but are used as adjectives such first/strong/mature etc., through the syllables that are derived out of it. The standalone semantic values of the logo have crucial role to play in deciding the syllabic value of the logo, but it only uses the modified syllabic value in the instances of the text. Although main syllabic value is maintained around it's primary consonant value, the syllables have pluripotency both in terms of semantics and syllables in context, i.e., they have modified vowels and soft consonants (glides).

This decipherment is not only about syllabary, it also provides complete semantic decipherment as well, uncovering various aspects of the life of Indus Valley Civilization. Most of the seals are about the barter trade transactions and describe from/to addresses, with mode-of-transport indicated in-between. The urn-symbol is deciphered as "ūr" (town/village) with various adjectives preceding it (or infused into the sign) describing the town. The unicorn-seal indicates that it is trade-related activity. The fish-signs and arrow signs describe the mode of transport of goods. The goods are indicated by the object before the animal indicating whether it is a food-type or not (perishable goods or not). The decipherment also uncovers aspects other than trade, like marriage and disputes.

Prelims

We list a few acronyms/initialisms that is commonly used in the article:

- IVC : Indus Valley Civilization
- 25 DED: Dravidian Etymology Dictionary [1]
- M77: MASI 77, Mahadevan [2]
- WB: Wells, B., Indus Writing [3]
- MVB: M.V.Bhaskar [4]

DED refers to the entry numbers in Dravidian Etymology Dictionary [1]. Here we use M77 to denote Mahadevan's sign numbers [2], but the glyphs in this paper were created using Asko Parbola's NFM Indus Script font. Mahadevan has simplified and reduced the number of signs, by considering many of them as variants of the same theme or treating them as identical. For a richer source of symbols and data, please refer to Wells [3] or the character list in NFM Indus Script font.

Introduction

35 Indus valley civilization was contemporary to other civilizations such as the Mesopotamia and Egyptian civilizations with it's own independent system of writing. Each of these systems had their

own culture and languages that were unique to their own civilization. It is a great challenge to decipher any one of them without a multilingual Rosetta stone, but such decipherments have been successfully achieved in the case of Linear Elamite [5]. In the case of Indus script it has been well
40 established, through various indirect attempts, that it is closely related in cultural aspects with the ancient Dravidian culture and language. However, broad confusion arises when attempts are made to relate it to an alphabetic system as it seems similar to a complex logo-syllabic system like the Egyptian system of writing. There have been many futile attempts to conjure-up such a relation between the Tamil Brahmi writing system and the Indus script, despite of the fact that the Indus
45 signs have strong pictorial content.

It took a while for the modern alphabets to arrive (around 1000 BCE) and one can expect that the logo-syllabic system of Indus script, like the earlier versions of Egyptian writing system, to be pre-alphabetic/abugida stage, where pure consonants have not yet been crystalized and extracted out of the spoken languages. From this decipherment it seems that the atomic units (signs) of the IVC
50 writing system are logo-syllables, with the high potential for creating homophones, thus reducing the number of signs required for the orchestration of the writing system within the specific context of IVC society and it's trade transactions.

In this decipherment, the author followed the trail left by these signs (like a detective), as it uncovers through internal evidences tracing them one by one. Sometimes serendipity plays a big
55 role in our findings, and all this would not have been possible but for the enormous sign lists and concordance data that has been gathered painstakingly by many reserachers over very many decades, making them freely accessible online. Of course, it also helps if your mother tongue has roots to the very same language and culture, although displaced in time by more than 5000 years!

In the next section we first outline the syllabary of Indus script as it is preceived here. Detailed list
60 of all symbols and their syllabic values are described in a later section on "Syllabic development". After the next section on orthography we briefly describe the skilled artistry of Indus writing system, then the crucial role of Numbers, Clitics and the system of "Learning through pun". In the section after "Syllabic development" we describe a few frequent phrases that emerge out of the corpus with two or three logos. We then classify a few logos under functional ideographic
65 categories (although they are primarily syllables they also have certain ideographic tendencies). Next we outline the crucial aspects of fish signs and their various manifestations. In the section after this we briefly sketch the dominant trade activities and their relative importance and it's implications in the development of a class society. We then go on to decipher several lines of text in the corpus and also seals containing interesting graphical content with their corresponding text in a
70 "Show and tell" section. We end the body of the article with sections about "Overlap with previous work" and "Acknowledgements".

Orthography of the Indus script

The logo-syllabic syllabary of Indus will be described here as it is preceived here in use. We try to discern if there are broad rules of orthography in this writing system that we can observe. We will
75 start with some simple number systems and see how they can prefix or suffix to other symbols/syllables in the system.

To begin with we use a simple rule that there is one and only one syllable to which each of these signs get assigned to. This is a simple rule to follow and it can be easily be discerned if it breaks. We will now describe the other patterns or rules that we observe.

- 80 Let us now consider the M77 sign-373 ○ to which we assign the syllable “pa” (from “pakaḷ”, meaning the sun or daylight). For the sign-86 | we assume that it has the value “mutaḷ” (the primary one) and then see how it applies to the sign-375 ⊙. We believe that this value is indicated by the sign-376 ☞ that has a tooth attached to it. So we have:

pa + mut-aḷ = paḷ

85

Now let us consider the sign-391 ⊗, a sign that we know has strong correlations with elephant seals from MVB [4] findings, so we assign the value “paḷḷa” that also has close proximity to “paḷ”, but we can see there are three cross-lines and/or six small pieces, making it more like “pillir”. There is also another possibility that this is decided by DED 1045 ṁṭai/ṁṭa, a metal badge that is applied to the forehead of the elephant. So we observe that although broad rules are applied, there are also *ideosyncracies* of local culture that also provide a few interesting twists and turns, but in general it tries to confirm to some broad outlines.

- 90

We will now move to the interesting sign-287), which we have assigned the value “valai/valai” after looking at it’s close cousins sign-298)))) and sign-290 𐌶 that has five strokes affixed to it’s top-right.

95

)))) = 𐌶 = vala + |||| = valai

Doubling on that we get,

)))) = valai + |||| = valai + ai = valaianjih or valaicci or valayacci

If sign-290 has three strokes on top we can get,

- 100 𐌶 = valai + ||| = valai + mu = valaiyam

Semantically “vala/vala” is “right/curved” as the symbol right parenthesis and when combined with “5” it becomes valai.

We also observed for M77 sign-62 (𐌶) that we can assign value “vālai” (scabbard fish that has sharp teeth). The sign-295 𐌶 “iru-valai” sounds similar to “ēri-vālai”. These signs also indicate that such deformation of the base syllable is possible, i.e., “valai” ≈ “vālai” and “ēri” ≈ “iru”. Of course, high homophony is one of the crucial principles in creating a script with minimal number of signs.

- 105

Next, we look at sign-81 (𐌶) that we assign the value “valai-puri”, while we assign sign-63 (𐌶) the value “kanni-pori” (DED 1183, 4538). This then decides “kanni” for fish-sign and “puri” ≈ “pori” for bird (quail) sign.

- 110

Based on these successes we decide to take a look on the other variants of fish-sign. For sign-70 𐌶 we apply “kāḷ” (DED 1483 assigns the semantic value of “cart”) and for sign-72 𐌶 “kōḷ” (DED 2238 assigns a semantic value of “raft/float”). One might ask why not assign the values the other way around, but the important clue comes from the cross-line that looks more like paddle/oar. Yes, again there are some *ideosyncracies* that comes with it.

115

We now move to sign-328 \cup for which we assign the value “ū/u/va”. So for the sign-332:

$$\text{𑌵} = \cup + \text{𑌶} = \text{va} + \text{ai} = \text{vai}$$

Similarly we also get the very important sign-342:

$$\text{𑌷} = \cup + \text{𑌸} = \text{ū} + \text{iru} = \text{ūr}$$

120 Next, we get on to double affix, sign-336 \cup :

$$\text{𑌹} = \cup + | + \text{𑌺} = \text{u} + \text{mu-ta-l} + \text{𑌺} = \text{uṭaṇ} \text{ (DED 945)}$$

Here sign-374 𑌺 takes the value “𑌺” (from droplet, “nīr”) and sign-336 \cup (uṭaṇ) has the ideographic association with mortar & pestle (a marriage ritual association as well)! In the M77 concordance list the sign-321 𑌸 is immediately preceded by sign-336 \cup . As the two sign-374 𑌺 are joined together by a string, a value of “ñāṇ” (DED 2908 “string”) will be the correct one:

$$\text{𑌸𑌹} = \text{uṭaṇ} + \text{ñāṇ} = \text{uṭaṇ-ñāṇ} \text{ (marriage agreement)}$$

Although the picture speaks thousand words there are also hints of syllables through micro-typography in Indus script. Consider sign-402:

$$\text{𑌻} = \text{𑌺} + | = \text{na} + \text{ṭu} = \text{naṭu}$$

$$130 \text{ 𑌼} = \text{𑌶} + \text{𑌻} = \text{nāl} + \text{naṭu} = \text{nāṭu}$$

$$\text{𑌽} = | + \text{𑌺} = \text{mutal} + \text{ni} = \text{maṇi}$$

$$\text{𑌾} = \text{𑌺} + | = \text{ni} + \text{mutal} = \text{aṇiyal}$$

and now let us consider another sign-51:

$$\text{𑌿} = \text{𑌶} + \text{𑌸} + \text{𑌾} = \text{mu} + \text{iru} + \text{an} = \text{māran}$$

135 with an additional twist as “māran” twists and looks back (a feature observed by Mahadevan and passed-on through personal communications by MVB).

Of course, we can also say as additional double-emphasis things like:

mu-kula-iru-vaṇi-māran

(triple generation true path Maran)

140 Now on to another topic:

M77 No.	Glyph	Roman	Tamil
169	𑌿	nilam	நிலம்
171	𑌾	nilai	நிலை
174	𑌾	iru-nēla	இருநெல்
88	𑌾	nal-iru	நல்-இரு

These are characters that seems to stand-out (pun intended with “nīl” being DED 3675 “to stand”), i.e., decided more by the context of IVC barter transactions and not by any complex orthography rules.

145 So as a broad outline we can say that the signs in IVC script are strongly associated with unique syllables and that the IVC writing system allows plenty of ways to mutate them in many ways from their base ideographic glyph values. However, it is not clear that in the case when there are multiple affixes applied, then which comes first, i.e., whether a base glyph applies first etc. In general one could assume it flows from right-to-left and top-to-bottom, but I suppose there are many exceptions
150 that are decided by the context.

For example the famous sign-116 '𑌕𑌕' can take the value “nellai/nallai” but the other-way around can also be “ayaḷ” is quite unlikely in the IVC transaction context. Sign-112 '𑌕' works as “munṇāḷ” but in the semantics of IVC transactions “ñālam” works better. Of course, both are possible and even within the context of IVC “munṇāḷ” might be a better choice in some particular
155 case.

The non-affixed pure IVC signs have unique syllables associated with them, which have either single consonant and two consonants at the most. The combining rules usually seem to drop the middle consonants, and of course the vowels are modified as pertinent to the situation.

In some cases the components may not be a disjoint merger but a continuous merger (welding) of
160 the two as in this case:

𑌕 = 𑌕 + 𑌕

taṛi = tan-vaṛi

Finally as an interesting remark I would like to bring to attention a nice little sign-310 𑌕 with a probable value of “vilaviḷa” (DED 5424) that sounds similar to “vavvāḷ” (long-tailed fruit
165 bat?) as used in this line of text:

𑌕 𑌕 𑌕 𑌕 𑌕

Trembling with fear “vilaviḷa” cognates well with “eerie bat”, so we try to decipher this line.

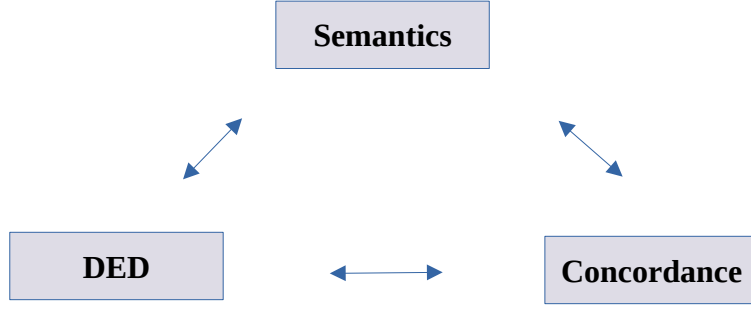

Vilamban trembling with fear “loading” (māṭṭu, 𑌕) the bow, but what’s to the right of vilamban, a tiger? Tiger trembling or the hunter trembling? So we notice that it could be:

170 ciruttai = cīpu + iru-tai = 𑌕 + 𑌕 (right-to-left) = 𑌕

This describes the process of discovery through an example. As a broader generalization we could insist for Dravidian decipherment that the following triangle commute (i.e., more like walking on three legs or squash on three walls):

175

180

We illustrate this with a line of text:

valan.ai-iru.valai-varvan.ur-anjih

185 To fit it into the context we need to modify this to:

valamai-iru.vilai-vuṛavan.ur-anjih
வளமை இருவிளை உழவனார் வஞ்சி

Semantics:

Fertile highly productive farmer's town paddy

190 or

Fertile double-crop farmer's town paddy

We now show how consonants and vowels express themselves in this system, but since it is not an alphabetic system, they don't carry any special importance by themselves as there are many more syllables with single and double consonants that are used to complete the language.

195 Consonants and their signs

Consonant	M77 sign	Glyph	Roman	Tamil
ka (க)	59	𑌕	kaṇṇi	கண்ணி
ce (சே)	76	𑌔	cēval	சேவல்
ta (த)	216	𑌖	tanṭi	தண்டி
pa (ப)	373	𑌘	pakal	பகல்
pu (பு)	78	𑌚	pūr	பூர்
pū (பூ)	54	𑌛	pū	பூ
ma (ம)	242	𑌙	māṭi, māṭu	மாடி, மாடு
mē (மே)	197	𑌛	mēl	மேல்
mu (மு)	86	𑌛	mu	மு, முதல்
mū (மூ)	89	𑌛	mū	மூ, மூணு
na (ன)	374	𑌛	na	ன
nā (நா)	95	𑌛	nāl	நால்
r (ர)	87	𑌛	ranṭu	ரண்டு
va (வ)	328	𑌛	va	வ

Consonant	M77 sign	Glyph	Roman	Tamil
ra (ர)	400	𑌕	ra	ருழ
ru (ரு)	110	𑌕𑌕𑌕𑌕	ru	ரு

Although vowels and glides can be arbitrarily mutated, modified or introduced in to the system while combining with the base syllable, the vowels are very much required at the beginning of a word. We list a few here.

200 Vowels and their signs

Vowel	M77 sign	Glyph	Roman	Tamil
an (அ)	1	𑌕	an	-அன்
āṭu (ஆ)	50	𑌕𑌕	āṭu	ஆத்து ஆடு
ila (இ)	323	𑌕	ila	இல
ūr (ஊ)	342	𑌕	ūr	ஊர்
eṛu (ஏ)	110	𑌕𑌕𑌕𑌕	eṛu	ஏழு

Skilled artistry of Indus script

At the core of Indus script lies the mastery of a skilled metallurgist (𑌕). We will illustrate this with these with few examples:

𑌕𑌕𑌕 = 𑌕𑌕𑌕 = vēl-aṇi-nuṛan-ūr = வேல்அணிநுழனூர்

The semantic meaning being the town with tailors, jewellery and hunting professions.

𑌕 = | 𑌕 𑌕 || 𑌕 = mu-iru-mēl-pēr-ul = மூவிரு மேல்பொருள்

In this case the semantic meaning could be the mighty great guardian of the township (elevated to kings and gods at later times).

Some important townships

- 205 This is just indicative of the various kinds of townships and professions, and a deeper quantitative study is required to obtain their relative importance. What is interesting is that the last one in the list is farmer's town, which doesn't count really as a town, but in Dravidian languages, the term "ūr" seems to cover what we call "village" also. Here we use M77 to denote Mahadevan's sign numbers [2], but the glyphs in this paper were created using Asko Parbola's NFM Indus Script font. DED
- 210 refers to the entry numbers in Dravidian Etymology Dictionary [1]. For a richer source of symbols and data, please refer to Wells [3]. Some of these signs here have been identified earlier by other authors, so a proper acknowledgment of these facts will be added later on in a separate section.

M77 Sign	Glyph	Syllable	DED	Description	Tamil
342	𑌕	ūr	752	town	ஊர்

M77 Sign	Glyph	Syllable	DED	Description	Tamil
347	𑌵𑌵	velūr	-	hunter's town	வேலூர்
358	𑌵𑌶	chevūr	-	bronze worker town	செவ்வூர்
351	𑌵𑌶𑌵	vel-nuṛan-ūr	-	hunter-cloth worker town	வேல்நுழுவூர்
?	𑌵𑌶𑌵	che-palla-ūr	-	bronze-elephant worker town	செவப்பல்லூர்
355	𑌵𑌶𑌵	vel-palla-ūr	-	hunter-elephant worker town	வேப்பல்லூர்
361	𑌵𑌶𑌵	che-ko-ūr	-	herder-bronze worker town	செங்கோவூர்
372	𑌵𑌶𑌵	vel-aṇi-nuṛan-ūr	-	hunter-jeweller-tailor town	வேல்அணிநுழனூர்
15	𑌵	uṛavūr	688	working, farming town	உழவூர்

Numbers

215 Numbers are treated separately, but they are just like other glyphs, easily welded and affixed to other glyphs, producing a plethora of possibilities. However, they are an important pointer to the fact that the actual standalone semantic value (in this case the numeric number) of the glyphs may have very little to do with it's semantic value.

M77 Sign	Glyph	Syllable	DED	Description	Tamil
86	𑌵	mutal, -al	4950	one, primary	முதல், -ல்
87	𑌵𑌵	-ar, -ir, iru-	474, 481	two, great, eminence	ரண்டு, -இர், -ர், இரு-
89	𑌵𑌵𑌵	mū-, mūn-	5052	three	மூ-, மூன்-
95	𑌵𑌵𑌵𑌵	nal-, -nāl, nalla-	2912	four, good	நல்-, -நால், நல்ல-
96	𑌵𑌵𑌵𑌵𑌵	-ai	2826	five, unity	-ஐ
108	𑌵𑌵𑌵𑌵𑌵𑌵	aru-, -ar	2485	six, river, fort	ஆறு, அறு
110	𑌵𑌵𑌵𑌵𑌵𑌵𑌵	eṛu-, -eṛu	910	seven, rise, fertile	ஏழு, -எழு
Application of above phonemes					
112	𑌵𑌵𑌵𑌵	nalām, nālam, munnāl	2913	land, healthy, before	நலம், நாலம், முன்னால்
116	𑌵𑌵𑌵𑌵𑌵	nallai, nellai	-	rice	நல்லை, நெல்லை
121	𑌵𑌵𑌵𑌵𑌵𑌵	nal.nel.āl	-	good rice person	நல்நெல்லாள்
120	𑌵𑌵𑌵𑌵	mu-munamum	-	three generations back	மும்முன்னோனும், மும்முன்னமும்
119	𑌵𑌵𑌵𑌵	mu-munnor	-	two generations	மும்முன்னோர்

M77 Sign	Glyph	Syllable	DED	Description	Tamil
				back	
107	'''	mūri, mūrā	5041	bullock, buffalo	மூரி, மூரா

Clitics

220 Clitics provide sentence structure (the subject and the object). The default reading order is right to left, but before the clitic  (sign 99), the reading is supposed to be left to right (but this doesn't seem to be followed strictly by writers of IVC script).

M77 No.	Glyph	Syllable	Tamil
97		-il, -da, -ta, -in	-ட, -டு, -த, -து -இல், -இன்
99		-ra, -ru	-ர, -ரு, -ற, -று
123		-yar, -yin	-யர், -யார்
344		ūr-ār	ஊரார்
343		ūr-il	ஊரில்

225 The Indus writing is not without it's own inaccuracies, either by themselves or captured by mistake by the scribes. We noticed a few cases where the clitic sign-99  has been captured as sign-87 , which in those particular instances seem more like a case of sign-99 rather than sign-87. However, it must be mentioned that there are very few mistakes in the Mahadevan's corpus (both in intent and purpose), which has done a nice balancing act between variety and simplicity, thus making it easier for decipherment. For a slightly different opinion from Mahadevan on the list of signs is Wells [3]. We follow Mahadevan's sign list and numbers here, but it must be possible to do it using Wells [3] 230 list of signs and sign-number as well without any loss of generality.

Learn through pun

235 Following are an indication of the pun that abounds in Indus script, which is termed as the “rebus principle”. Of course, it only makes sense if your language is close to ancient Dravidian. For deeper understanding you may have to refer to some of the sign values below this in the section on “Syllabic development”. We only sketch a few, but the Indus script syllabary abounds in such pun. The reduction of number of glyphs required for a writing system for Dravidian language is very much dependent on prudently choosing glyphs that provide highest possible homophony.

M77 Sign	Glyph	Syllable	DED	Description	Tamil
298		valai = vala+ai	5267, 5288) = vala+5	வல+ஐ=வலை
	Right-parenthesis is “vala” (curved as well as right) in Tamil and “vala” + “ai” = “valai”. “vala” is curve, as well as “right”, which fits well with description of right parenthesis. Also,  can be further expanded as “valaicci” or “valayacci” or “valayanjih”.				
62		valai-kanni	5379	scabbard fish with fang-like teeth	வாளை கன்னி (மீன்)
	The fish “vālai” is known as the scabbard fish that has sharp teeth. A nice tooth is				

M77 Sign	Glyph	Syllable	DED	Description	Tamil
	drawn at the top to elucidate the learning. This explains that the right-parenthesis sign-287 carry the phonetic value “valai”				
295	𑌕	eri-valai	902	Another sharp tooth fish	ஏரி வாளை (மீன்)
	A fresh water shark, Wallago attu , also known “eri-valai”, a pun again on the word with rebus equation: “vālai” ≈ “valai”. The prefix “eri” comes from “two” or “iru”, leading to one more rebus equation: “iru” ≈ “eri”.				
63	𑌕𑌕	kanni-pori-valai	-	Trapping of birds	கன்னி-பொறி-வலை
	This learning tablet defines the phonetic value of fish as “kanni” and the bird as “puri” by defining it through a polysyllabic pun as “kanni-pori” with a parenthetic “valai” . The “kanni-pori” in Tamil is “trapping”.				
64	𑌕𑌕𑌕	valai-kanni	-	The clitic reverses reading order	கன்னி-பொறி-வலை
	The clitic sign 64 reverses the reading order to the right of it. This learning script defines that.				
376	𑌕𑌕𑌕𑌕	pal	-	teeth	பல்லு
	A teeth is indicated by the protruding teeth effect, just like in the fish teeth.				
57	𑌕𑌕𑌕𑌕𑌕	irumpu	486	iron	இரும்பு
	Now we have triple pun: iru-pu (two insects) ≈ erumpu (ant) ≈ irumpu (iron)				
181	𑌕𑌕𑌕𑌕𑌕𑌕	kottu	2065, 2064	pour (sting)	கொட்டு
	We can see pincler claws are indicated to show “sting” and “pour” are homophones in Dravidian “kottu”. The stinging honey-bee also is supposed elucidate connotations of “honey” that pours (kottu) from the beehive.				
310	𑌕𑌕𑌕𑌕𑌕𑌕𑌕	vila-vila	5424	tremble with fear	விலவில
	This cognates with “vavvāl” (DED 5370), probably a long-tailed fruit bat, with an eerie shivering scene that it creates.				
303	𑌕𑌕𑌕𑌕𑌕𑌕𑌕𑌕	iṭa,	432	cleft, gap, split, crack open , slit, breach, chasm	இட
	Also works as “iṭaveli” ≈ “iṭai-valai”.				

Signs and affixes

240 Just to give a flavor of the decipherment here we group few signs under base/affix geometry. In some cases there could be more than one affix. For more details see next section “Syllabic development”.

Sign ○

Affix Base						Ψ	○	◊	○	⋈	-
○	①	②	③	④	⑤	⑥	⑦	⑧	⑨	⑩	⑪
pa	pal	para	pammu	nal- para	pallā	vel-appa	pān	cirapp u	pānal	pān-an	nal-pallar
பா	பல்	பற	பம்மு	நல்பற	பல்லா	வெல்-ப்பா	பாண்	சிறப்பு	பானல்	பானன்	நல்பல்லர்

Sign U

Affix Base					○	○	Ψ	-	⋈ Ψ
U	U	U	U	U	U	U	U	U	U
ū	vaḷ	ūr	ūm	vai	uṭaṇ	uṭai	velūr	chevūr	vel-aṇi-nuṇan-ūr
ஊ	வள்	ஊர்	உம்	வை	உடன்	உடை	வேலூர்	செவ்வூர்	வேலணிநுழனூர்

Sign ✕

Affix Base		○			⋈		⋈	-	⋈
✕	✕	✕	✕	✕	✕	✕	✕	✕	✕

Fish signs and it's varied manifestations

265 If we look at the frequency of the consonants in Tamil (both modern and old), the one that comes on top is “ka” and not “ma” or “mi”. We know that the fish sign is the most frequent in Indus script, so the obvious Turing’s not so enigmatic result is that the fish sign must start with “ka” and we found “kanni” is probably more feasible. However, our result “kanni” is independent of it and was inspired by M.V.Bhaskar’s interpretation (personal communication) that the “Garial” (the river crocodile) is synonymous with fish and was probably trained and used as a boat. My own personal exposure to local customs also revealed that “kanni” is a term used commonly in earlier times for 270 boat or any vehicle. The analogy could be that “kanni” refering to a women carrying children or it could be that the boat itself was driven by women in those days. However, this analogy is not without it’s difficulty. The word “kaṇṇi” refered in modern Tamil to be a maiden is without any support in DED [1]. The only support comes the word “kaṇi” according to DED 1408 is “tender”,

275 “love”, “devotion” etc., and so is “kātal” DED 1445 - “love”, “affection”, “lust” etc. From not so mystical angle it could be just derived from “kaṇ” DED 1159 “eye”, “peacock’s tail”, probably leading to a mystical euphemism. Support from another quarter is “traveling places” come from DED 1443 “kāṇ” – “to see”, DED 1161 “kaṇ” – “place”, DED 1166 “kaṇai” - “arrow”, and DED 1109 “kaṭa” - “to move”. The interpretation that it is “kaṇṇi” is reinforced by other evidences like sign-63 “kaṇṇi-pori”, where it is meant as a “snare” DED 1183+4538.

280 Assuming that sign-59 𑌕 is “kaṇṇi”, it could mean any of these things: vehicle, boat, cart, trap, trapper, soft, tender etc. We will show lines of text that seem to provide such evidences, but before that we decide a few variants of fish sign and phrases:

Standalone fish signs

M77 Sign	Glyph	Syllable	DED	Description	Tamil
59	𑌕	kaṇ, kaṇṇi	1408, 1109, 1183, 1159	boat, bamboo raft, soft, trapping	கண், கண்ணி

Sample line 1 (kanni = trapper)

𑌕 𑌕 𑌕 |

mutal-vilampan-mu.malai-kanni

300 Proto-Peninsular Dravidian ... It is the source of the word for ‘paddy’—i.e., rice in the field or after

harvesting and threshing, either husked or unhusked, but not yet cooked—in most of the modern Peninsular Dravidian languages. This word may be connected to the Elamite bar ‘seed’—though there is some doubt, as the phonetic correspondences are not regular. A related form, *ari-ci/ki, with variants ari, arici, akki, arki (the last two ← *ariki) DED 215”

305 The Indus barter exchange system

We only illustrate the key points here. The local barter happens in the undocumented unorganized sector at the cross-roads (X), in what is termed as “cantai” (சந்தை) in modern Tamil. The exchange is abstracted by the symbol X and the barter mediated by X (maran?), who is usually qualified by great reliable ancestary (flowery self-praise by the system). The exchange is done by symbol V (kol, the dagger of exchange) and X (an abstraction of the cross-road, X). Most of the script pertains to official barter transactions of Indus, which are really instructions of transporation mode and the origin/destination. The clitics like M77-99) orchestrate the sentence structure of the lines of the seals. An highly compressed form of information exchange mechanism is enabled by the drsastic use of poly-semantic logo-syllabic script with each of these logo-syllables having many semantic possibilities with high degree of pun. This is so deeply wedded to Indus culture and mode of exchange that the deciphering of it has taken so long. The skills of bronze-age artisans is in full display here with those hundreds of poly-semantic logo-syllables crafted and designed with care to work in those small spaces available in the seals. What is interesting that the deeply mysterious swastic symbol (M77-148) is now understood as the mundane:

320 𑀩 = X + V = cērukoḷ = சேர்ந்துகொள்

i.e., declaration of an important exchange, which is usually followed by drum beats '00'. The drum beats are also a way to invite more people to the square for exchange (at cross-roads).

Relative volume of trade

We consider the absolute occurance numbers in the text and also the association to the right of sign no. 99 M. If we assume that what procedes (to the right of) sign. 99 M is the sender of goods then we get the following data:

Glyph	Description	No. occurances	Forward transactions
𑀓	Cattle	369	290
𑀕	Ivory	182	82
𑀔	Hunting and trapping	130	61
𑀖	Agriculture	225	18
𑀗	Honey	44	18
𑀘	Elephant herding?	15	10
𑀙	Cross-road	41	8
𑀚	Tailoring	14	4

Glyph	Description	No. occurrences	Forward transactions
𑌕	Jewellery	12	3

Among 634 occurrences in IVC text with sign no. 99, assuming that what comes to it's right is the region that is sending commodities to the other regions, we can summarize that cattle and agriculture were the dominant activities, closely followed by carpentry and elephant-based products. Hunting, honey-gathering, fishing, carpentry, weaving and stitching were the other important activities that created products participating in the organized barter system of IVC. Hunting, honey-gathering, fishing, carpentry, metallurgy, weaving and stitching were the other important activities that created products participating in the organized barter system of IVC.

Class structure of IVC

It seems from the table above that the cattle herders had the dominant trade surplus and probably the agriculturists had the highest trade deficit. Sign-41 𑌕 kīrān (DED 1621) கீழான் refers to a poor person and studying his concordance we see that he is strongly associated with sign-137 𑌕 cēri (DED 207) சேரி, a place where many people assemble, associated in modern terms with the hut dwellments or slums in cities. It is quite surprising that this association has remained true for 5000 years! It is also noted that sign-41 𑌕 (kīrān) has atleast one association with all professions, except cattle herding (sign-267 𑌕). So it is clear that there is a class structure associated with IVC which puts cattle-herders (𑌕) at the top.

Praise heaped on the farmer

The barter system's accumulation of wealth by the ruling elite (sign-30 𑌕 "kovan"), accumulated in store-houses (sign-267 𑌕 "koṭṭa") necessitates a rhetoric of praise on the toiling farmer (sign-12 𑌕 "vuṇavan") like:

M77 signs	Glyphs	Syllable	Tamil	Description
12-75	𑌕 𑌕	peru.mu.kanni-vuṇavan	பெரும்முக்கன்னி உழவன்	Enormously mature and soft farmer
12-2-86	𑌕 𑌕	mutal-kāvalan-vuṇavan	முதன்மை காவலன் உழவன்	First guardian farmer
12-325-86	𑌕 𑌕	mutal-ilai-vuṇavan	முன்னிலை உழவன்	The foremost farmer

Such eulogy of farmer and farming has continued even 2000 years after IVC culture in Thirukkural:

Kural 1031: Howe'er they roam, the world must follow still the plougher's team;

Kural 1032: The ploughers are the linch-pin of the world; they bear.

Hunter/trapper townsman's three-mountain country
வேட்டையாடி வலை பிடிக்கும் ஊர் மூம்மலை நாடு

The break-up steps:

)): valai-an-in (வலையனின்)

415 𐤁𐤏: ur-ār (உரார்)

𑌕𑌖𑌖: mu-nāṭu (முநாடு)

4. M77 Line 1032-100101

420 NFM font equivalent rendering:

Cattle country: prized goods sent by stable boat
கோட்டோர்: பெருமூதல் பொருள் நிலை கன்னியில் அனுப்பு(கிறார்)

The break-up steps:

425 "◊: kot-ūr (கோட்டுரை)

↑↑: peru.mutal-porul (பெருமுதல் பொருள்)

𑌕𑌃𑌔𑌃: nilai-kanni-anuppu (நிலை கன்னி அனுப்பு)

5. M77 Line 1067-100101

430 NFM font equivalent rendering:

The pearl necklaces are being bartered in cattle country
அணியல் மாற்றம் கொட நாட்டில்

The break-up steps:

435 †: aniyal (அணியல்)

☸: marram (மாற்றம்)

௧௩: koda-nātu-il (கொடநாட்டில்)

6. M77 Line 1088-100101

440

NFM font equivalent rendering:

Elephant country velappan: sends by bullock cart

பல்லார் வேலப்பன்: மாட்டு வண்டியில் அனுப்பு(கிறார்)

445 The break-up steps:

☉☉☉: palla-ar-velappa (பல்லார் வேலப்பன்)

☉☉: konde-kanni (கொண்டே கன்னி)

☉: anuppu (அனுப்பு)

7. M77 Line 1095-100101

450

NFM font equivalent rendering:

Cross-roads countryman sends cart to velappa town

நால்வழியார் வண்டி வேலப்ப ஊர்(க்கு)

455 The break-up steps:

☉☉☉: nal-vari (நால்வழியில்)

☉: kāl (கால்)

☉☉: velappa-ur (வேலப்ப ஊர்)

Pluripotency

460 The fish sign-59 ☉ kanni takes the values of boat, craft, vehicle, bullock cart in these cases. We have also observed that in some other case:

that the sign-59 ☉ kanni takes the value of “trapper” or “trapping”.

465 From these readings we also obtained:

ampu ≈ anuppu ≈ ambi

kondā ≈ konda

The syllables not only took different semantic values from the standalone values but they also took a deformed phonemic values, a key aspect of Indus writing system that enables pluripotency in both form and content in order increase coverage with only a few signs, thus increasing literacy.

470

Further readings

The above section considered just seven sentences in IVC text, but there are several thousand lines of text in M77 [2] and we will be pursuing deciphering them over time. Few pages have already been

475 deciphered from the lines of text available in Mahadevan's work [2]. The results will be reported in online version tracking system, as and when we decipher them [7].

Graphics and text: a show and tell

In this document we decipher the text embedded along with illustrated scene in some of the IVC tablets. We have selected only the ones that have certain dramatic element in it.

M77	Graphics	Glyphs	Syllables	Description	Tamil
Plate V - 98		𑀮𑀺𑀭𑀸𑀓𑀺𑀭𑀸	tallu-utai	push-kick	தள்ளு உதை

Line 1093		𑌕𑌃 𑌕𑌃𑌕𑌃 𑌕𑌃	konda ūr-tarupu-ūr velūr-ūr	Gathering of buffalo townsmen at Velūr town	கொண்ட ஊர் தறுப்பூர் வேலூர் ஊர்

Major countries depicted by animals in seals

480 This is another major category that is directly indicated by animals.

Plate III -55 [2]

485

Here we can see five major countries indicated branching from two unicorn motifs and here with two of them further branching into two subcategories.

The seal on the right is either calling for (or celebrating) bartering between five countries:

490 ് || ് (para-ar-ūr, பறையூர்)

calling for five nations to join in the barter system

சசசசச

(cērukoḷ, சேர்ந்துகொள்)

The animals that seem to indicate the five nations [4] in the seals are:

495 Markhor/Gaur (bison) ◇, Buffalo □, Elephant ⊗, Rhino ? and Tiger ⚡.

Although all the skills and specialised skill centers (vanjih, ல்) are all distributed all over the towns and villages of all countries, in triple mountain tiger country (Afghanistan?) there seems to be preponderance of hunters, animal trappers and honey collectors.

A brief summary of the of the IVC writing system

500 The IVC system can be considered as a resolution of the contradiction arising between pure ideographic and pure syllabic system of writing. We were able to associate unique syllabic value to every sign. Although the ideographic system allows easy understanding of the base signs through a Dravidian root-word association, they also create a complex plethora of signs for the IVC writer to recognize and use. In order to reduce the number of signs needed, a pure syllable-based number

505 system seems to have been used, which is affixed/prefixed/welded to the base sign to produce agglutination of word-pieces. The core consonant backbone of the base is maintained in the agglutination process, but the affixes may retain only the front/middle/tail syllable, depending on whether it is affixed/infixes/prefixed, respectively. Although each sign signifies a syllable and not a concept or idea, an ideographic undercurrent remains strong throughout the IVC writing system,

510 creating certain stability of the semantics of the writing system. It is also observed that certain amount of arbitrariness is allowed during the agglutination process: deletion, modification or addition of vowels/glides. Glides are soft consonants that are added as binders for smooth phonetic

transition between hard consonants. For proper understanding of practical Tamil grammar as it is spoken now one can consult Harold F. Schiffman [8], but one must not apply these grammar rules
515 blindly to the IVC writing system, as 5000 years separate the present Dravidian languages and the IVC languages.

Overlap with previous work

No work germinates on it's own; it usually germinates on a fertile ground laid down by others. There were many conjectures on this Indus writing system by Asko Parbola, Iravadham Mahadevan
520 and Brian Wells. I will briefly outline some of them pointing out overlaps and differences. It all started with the interpretation for fish sign as “mīn” by father Heras in 1930s [9]. This was reiterated with caution by Iravadham Mahadevan [10]. If we look at the frequency of the consonants in Tamil (both modern and old), the one that comes on top is “ka” and not “ma” or “mi”. We know that the fish sign is the most frequent in Indus script, so the obvious Turing's not so enigmatic result
525 is that the fish sign must start with “ka” and we found “kanni” is probably more feasible. However, our result is independent of it and was inspired by M.V.Bhaskar's interpretation (personal communication) that the “Garial” (the river crocodile) is synonymous with fish and was probably trained and used as a boat. My own personal exposure to local customs also revealed that “kanni” is a term used commonly in earlier times for boat or any vehicle. This was probably dropped later on
530 in Tamil literature. The same however continues in Indo-European tradition that associates feminine gender to even a modern vehicle like train inflecting verb appropriately.

There were many interpretations by Asko Parbola and Mahadevan [11] on the M77 sign-342 𑀓, including “-an”. MVB was quite critical of this being male-centric, an apt criticism, as he found no preponderance of male domination in IVC art. The interpretation of sign-1 𑀕 as “-an” has also been
535 proposed by Bryan Wells [3] and then MVB's criticism can be cleverly overcome by stating that “-an/-al” could have been sex-neutral term in those days and associating “-al” with feminine gender could have been a later invention by the male-dominant society (especially as “-al” has connotation with darkness and evil). On other proposals of Iravadham Mahadevan and Bryan Wells's on numbers as being semantically numbers, we found no parallels in our interpretations. In fact, the
540 numbers are probably the only signs that almost never reflected their standalone ideographic value. This was indeed quite surprising for us, as we found almost no evidence for this. MVB has been quite radical in this interpretation, proposing that almost a new syllabic system can be conjured-up using just the numbers alone.

Yuri Knorozov [12] has also done extensive study of the IVC writing system and he has correctly
545 identified numbers as syllables, with sign-86 𑀓 identified as “or”, 𑀔 as “iru”, 𑀕 as “mu”, 𑀖 as “nal”, 𑀗 as “ai”. This is exactly as what we have deciphered here, although we consider sign-86 𑀓 as “mutal” and not “or”.

Bryan Wells's work also proposes other possibilities like sign-358 𑀓 being closely related to the Hare's ears and so proposing the syllable “ce” from “cevia”. The author is in full agreement with
550 this proposal and in fact, both this and sign-76 𑀓 also evokes the same “ce” syllables. In the IVC context of bronze-age, these have semantic connotations to “cembu” (bronze). Bryan Wells also proposed “kō” for sign-261 𑀓 and “kōṭa” for sign-267 𑀓. We are fully in agreement with these readings.

555 Ansumali Mukhopadhyay [13] studied the word for teeth, “pa l l a” and it’s relationship to the ivory trade. The sign-391 𑀧 is here deciphered as “pa l l a”, the elephant, an important sign in the IVC, especially in relationship to the ivory trade. There could have been many more proposals that may have some overlap with our interpretations here. We would be glad to include them in our document as soon as we are made aware of them.

560 Farmer et al. [14] criticism that the average number of signs in a line are two short (on the average of between 4 and 5 signs) for any meaningful orchestration of a writing system is quite correct. However, our decipherment points out that these lines of text are mostly **from/to** addresses with mode of transport indicated through fish and arrow signs in-between the **from** and **to** addresses. Sometimes the mode of transport is left out (or is implied) and the same could be true of the **to** address, which probably is implied from the context. There are also very short lines heaping praise
565 on towns and their workers. In any case, writing in crisp and short messages is a tradition that has continued for a long-time in Dravidian tradition, as established in Thirukkural, which is taught even now in schools of Tamilnadu.

Conclusions

570 First important study of the Dravidian family of languages was by Caldwell [15] in 1886. Recent studies indicate that the temporal origin of proto-Dravidian to be around 2500 BCE [16, 17], so it can be discerned that the Indus script could have been a major epicenter for the formation of the identity of Dravidian language family. We can even go ahead and conjecture that some aspects of Dravidian linguistic structure could have been a result of remoulding of languages of the Indus Valley Civilization into an agglutinative reformulation as contrained and evolved by the Indus script.
575 After the gradual decay of IVC, with southern migration of the population, the language could have radiated into the many branches of Dravidian family [16]. A detailed study of the decipherment and it’s relationship to Dravidian morphology could provide further clarity on this feasibility.

Acknowledgements

580 The decipherment became possible with the arrival of the splendid work by MVB [4]. This laid down the map that lead to all the linkage between graphics and the text, building this beautiful journey of discovery enabled by M.V. Bhaskar, with whom I have been working for the past several years. My learning in art, Brahmi and Indus Script derived from his interactions. Of course, all this work could not have been possible without the enormous efforts of Asko Parbola, Irvadham Mahadevan, Bryan Wells and many others. Thanks are also due to Eugenia Vanina for enlightening
585 me about works by Russian scholars on Dravidian languages and the Indus script, especially the collected works of Yuri Knorozov [12].

Funding and Data availability statement

590 Partial funding was received from TNQ Foundation, Chennai while completing this work. All data required to access the scientific veracity of the work is available through the references cited at the end of the text and through the open web portal: <https://github.com/Sukii/decipher-ivc>. Any other data or references cited can be provided on request.

Conflict of interest

Author would like to state that there is no conflict of interest in this paper.
